ISLE OF MAN / INTERNATIONAL TRADE DESK

GLOBAL PROCUREMENT

Manufacturer-direct sourcing. Worldwide delivery coordination.

A premium procurement framework for industrial buyers, project developers and global distributors seeking qualified manufacturers, aggregated purchasing and export-ready logistics.

01 / SOURCE
Manufacturer network

→

02 / COORDINATE
Isle of Man desk

→

03 / DELIVER
Global destination

Commercial principle | Price and tax treatment are specified by transaction. Eligible exports may qualify for VAT zero-rating; destination-country taxes and duties are assessed separately.

What we can source

A flexible buying desk for factory-direct goods, engineered packages and repeat replenishment.

Industrial automation

Robotics, CNC and machine tools, conveyors, sensors, PLCs, warehouse automation and spare-part programmes.

Energy & electrical

Transformers, switchgear, cabling, power electronics, solar balance-of-system equipment, storage components and industrial controls.

Electronics & data infrastructure

Servers, networking, racks, fibre and connectivity hardware, power distribution, cooling components and test equipment.

Construction & project materials

Engineered steelwork, fixings, pumps, valves, modular building systems, site equipment and pre-agreed material schedules.

Transport & maritime

Marine equipment, pumps, auxiliary systems, workshop tools, port equipment, commercial vehicle parts and fleet-maintenance stock.

Metals & industrial components

Specified metals, castings, forgings, bearings, machined parts and quality-controlled components against engineering drawings.

Commercial & hospitality

Commercial refrigeration, kitchen systems, laundry equipment, fit-out packages, lighting and hotel / institutional supplies.

Laboratory & specialist equipment

Measurement systems, scientific instruments, clean-room equipment and selected medical or controlled goods subject to approvals.

Scope note. This is a category map, not a claim that every item is currently in stock or pre-approved. Supply is confirmed against specification, supplier due diligence, export controls, product conformity and destination requirements.

Four buying levels

Scale the mandate from a first factory trial to a coordinated, multi-shipment supply programme.

01 Pilot & qualification

£25k - £100k

One to three product families; samples, factory validation, supplier checks, specification matching and a first shipment plan.

Best for: new suppliers, proof-of-concept and first orders.

02 Operational sourcing

£100k - £500k

Repeat replenishment, pallet or container lots, order consolidation, shipment scheduling and standard documentation.

Best for: distributors, maintenance stock and recurring demand.

03 Strategic project package

£500k - £2m

Multi-supplier procurement, staged delivery, pre-shipment inspection, component matching and project-level reporting.

Best for: construction, energy, automation and data infrastructure.

04 Global programme

£2m+

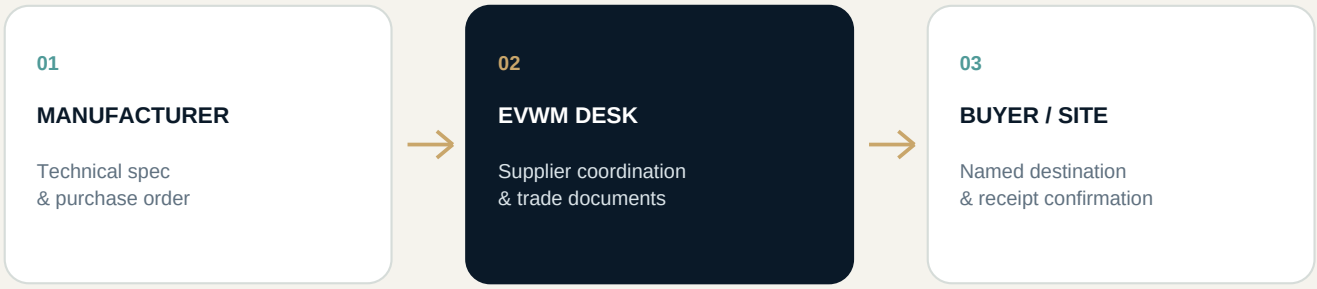
Annual supply frameworks, multiple destinations, rolling call-offs, dedicated procurement governance and escalation routes.

Best for: industrial groups, major projects and international channels.

Important: These are illustrative mandate bands for the procurement display, not minimum order commitments, verified price lists or supplier quotations. Actual values depend on product, specification, currency, factory terms, freight and delivery profile.

One desk. Three delivery routes.

The best route is the one that meets the delivery brief without adding avoidable handling, delay or tax leakage.



A

Factory-direct dispatch

Goods ship from manufacturer to buyer or project site, while EVWM coordinates specification, purchasing, documents and freight. Often best for speed and cost.

B

Consolidate, then dispatch

Goods from several suppliers are grouped at a suitable logistics facility when consolidation, inspection, kitting or split delivery justifies handling.

C

Island arrival and re-export

Goods physically arrive in the Isle of Man before onward shipment only where a documented business case supports the route. Border formalities, handling and tax treatment are checked first.

HOW AN EXPORT QUOTE IS BUILT

GOODS	+	SERVICES	+	LOGISTICS
Manufacturer price		Sourcing / QA / coordination		Freight / insurance / handling

Eligible export supply: VAT treatment applied only where the transaction qualifies and the required evidence is retained. Destination import VAT, customs duties, excise and local charges are scoped separately.

Illustrative sourcing board

A practical display of what can be quoted, at what scale and in what shipment formation.

Display basis: ranges below are example planning bands for discussion, not live inventory, contracted capacity or firm prices.

SOURCING LANE	ILLUSTRATIVE ORDER	SHIPMENT FORM	QUOTE / CONTROL BASIS
Automation & robotics	£50k-£500k	Crated freight; LCL / FCL	Model, duty classification, safety documentation, commissioning scope.
Servers & data infrastructure	£100k-£1m	Palletised air / sea; staged loads	SKU list, warranty, origin, encryption/export controls where relevant.
Energy & switchgear	£150k-£2m	Project freight; container / break bulk	Voltage, certification, grid/site standards, factory test records.
Engineered materials	£100k-£2m	Container / break bulk	Material grade, mill certificates, tolerances, inspection and packing.
Marine & port equipment	£50k-£750k	Crated / project cargo	Vessel/site specs, marine approvals, spares, delivery window.
Commercial fit-out	£25k-£500k	Mixed pallets / consolidated loads	Bill of quantities, compatibility, phased drop schedule.
Lab / specialist equipment	£25k-£500k	Protected / temperature-managed as needed	Licences, intended use, product approvals, after-sales service.

EXAMPLE COMMERCIAL DISPLAY

Quote the same specification at three levels: **pilot lot** (validate), **project batch** (reduce procurement fragmentation), or **framework call-off** (schedule repeat deliveries). Unit economics must include freight, insurance, handling, compliance and destination landed-cost estimates.

Export-ready. Tax-aware. Documented.

A strong procurement desk protects the buyer from false savings claims, incomplete paperwork and avoidable border surprises.

COMMERCIAL SAFEGUARDS

Correct VAT treatment

The Isle of Man is treated as part of the UK for VAT and customs purposes under the common framework. Standard rate is generally 20%; rates and liability depend on goods, services and place of supply.

Zero-rating is conditional

Eligible export goods may be zero-rated only when applicable conditions, time limits and evidence of export are satisfied. No blanket “tax-free on every product” promise.

Destination costs stay visible

Import VAT, tariff duty, excise, local fees, brokerage and product levies may arise in the destination market. Quote these separately or model them as landed cost.

Controlled goods screened

Sanctions, export controls, dual-use rules, dangerous goods, product safety, origin and licensing checks before order acceptance.

TYPICAL PROCUREMENT WORKFLOW

01 **Buyer brief & specification**

02 **Supplier and origin checks**

03 **Quote, Incoterms and tax review**

04 **Purchase order / inspection plan**

05 **Export documents and dispatch**

06 **Proof of delivery and close-out**

HOW THE BROCHURE DISPLAYS TAX

GOODS VALUE	ELIGIBLE EXPORT VAT	DESTINATION CHARGES
£100,000	£0 at 0%	Quoted separately

Illustration only. The zero-rated line is available only where the transaction qualifies; it does not remove destination import VAT, duty, excise or other charges.

OFFICIAL GUIDANCE & NEXT STEP

Use these primary references to confirm the treatment for each order and destination:

- Isle of Man Government - VAT
- Isle of Man Government - Imports and exports
- HMRC - VAT on goods exported from the UK (Notice 703; updated 4 March 2026)

Enquiry brief: Send the product specification, target quantity, destination, required delivery date and preferred Incoterm for a written sourcing review. Supplier availability, prices, lead times and tax treatment are confirmed case-by-case.
