

Executive Summary

This report outlines a technically rigorous redesign of an 18-hole links course on the Isle of Man's Langness Peninsula, using Castletown Golf Links (Langness, Castletown) as the baseline. Castletown (par-72, 6,800 yds [black tees] [13†L64-L65]) occupies a narrow triangular headland surrounded on three sides by the Irish Sea [36†L219-L228] , with views from every hole. Its turf is tight-knit and quick-draining [2†L221-L225] , typical of true links; prevailing Atlantic winds from the west and southwest batter the exposed contours (there are no dune "hollows" to shelter from wind [2†L221-L225]). The site is a protected UNESCO Biosphere Reserve core zone and an Area of Special Scientific Interest (ASSI) managed in partnership with Nature Vannin and Manx BirdLife [2†L180-L189] [24†L537-L543] . In redesigning a perfect links we preserve these wild characteristics, enhance strategic variety, and apply best practices from classic links architecture (St Andrews, Royal County Down, Royal Dornoch, etc.).

Key tasks and constraints addressed include: collecting Castletown's hole lengths, pars and routing (derived from official scorecards and descriptions [7†L172-L180] [13†L44-L52]); analyzing Isle of Man coastal terrain (Langness geology: Carboniferous conglomerates and limestones with glacial sands [31†L218-L227] , low elevation but rugged sea cliffs and bays); climate and wind (cool maritime, frequent gale-force winds off the Irish Sea); tidal influences on exposed holes; sensitive habitats and planning (site of rare coastal flora/fauna, ASSI/UNESCO designation [2†L180-L189] [24†L537-L543]); and construction logistics (access via Castletown road, minimal heavy earthwork restrictions, need for ASSI consents for borehole/irrigation [24†L537-L543]). We benchmark against exemplar links: e.g. **St Andrews (Old Course)** – shared fairways, double greens, blind shots, pot bunkers – to inspire variety; **Royal County Down** – dramatic dunes, deep "pit" bunkers, small gathering greens [48†L42-L46] ; **Royal Dornoch** and **Ballybunion** – use of natural dune topography for complexity; **Kingsbarns** (modern) – bold bunkering and fescue turf integration.

The heart of the proposal is a hole-by-hole redesign (Holes 1–18) with detailed technical recommendations: for each hole we specify length/par (Championship, Men's, Women's), tee locations, fairway routing and widths, ideal landing zones, green size/shape/contours, bunker placement/depth, elevation profile, strategic options, and construction notes. The overall routing is a loop around the peninsula, starting and finishing near the clubhouse, and incorporates exposed cliffside carries (notably proposed Par-4 17th and Par-4 18th) and a variety of wind-angled holes. We include a schematic routing diagram and a master scorecard with new yardages and par. Total yardage options are given (e.g. Championship ~ 6800 yds, Men's ~ 6500 yds, Women's ~ 6000 yds, Par 72), as well as a balanced par mix (4×Par 5, 11×Par 4, 3×Par 3).

Tables compare Castletown's original specifications with our proposed changes on each hole. Finally, maintenance/drainage/irrigation/grass recommendations are provided: e.g. fescue-bent grasses, sand-based greens, a high-capacity drainage network, minimal irrigation (borehole supply) consistent with ASSI principles [24†L537-L543] . A Mermaid Gantt chart outlines a construction timeline (permitting, earthworks, green and fairway build, grow-in), and cost categories (high: major earthworks/irrigation; medium: bunker construction, cart paths; low: signage, minor tees) are estimated. Assumptions (site footprint flexibility, standard links turf conditions, etc.) are noted throughout.

1. Castletown Golf Links – Existing Specifications

Location & History: Castletown Golf Links (Langness Peninsula, Isle of Man) is a championship links course originally by Old Tom Morris (1892), later refined by Alister MacKenzie (1913) and Philip Mackenzie Ross (post-WWII) [2†L122-L130] . It occupies a narrow headland (base <200 m wide) reaching south into the Irish Sea [2†L180-L189] [36†L219-L228] . The site is an ASSI and UNESCO Biosphere core zone [2†L180-L189] [24†L537-L543] , supporting >100 bird species, seals, gorse, heather and native grasses [2†L180-L189] [24†L537-L543] .

Yardages & Par (Tees): The course is Par 72 from championship (Black) tees (6,800 yds total) [13†L64-L65] . (Other tee totals: White 6,431 yds; Yellow 5,887 yds; Red 5,643 yds; Blue 5,013 yds [13†L64-L65] .) There are 4 Par 5s and 3 Par 3s (holes 8,13,16) at championship. Hole 11 (“Bay”) plays as Par 4 for men (442 yds Black) but Par 5 for women (439 yds White) [13†L55-L63] , yielding a Par 72 (men) or 73 (ladies) total.

Hole Routing & Terrain: The 1st tee is upland; no tee shot is downhill. The original routing roughly follows the peninsula: holes 1–9 loop out along one side, holes 10–18 return along the other side, finishing near the clubhouse (see routing map below). Key terrain features include sea cliffs and bays on both flanks. The fairways are typically firm and outcropped (there are almost **no sand dunes** to wind-shelter [2†L221-L225] , but many natural hollows and heather banks). Elevation changes are moderate (tens of metres): for example, hole 1 is “short by yardage but plays uphill” [18†L34-L38] , hole 8/16 are plateaus or cliffs offering seaside views, and holes 17–18 traverse deep rocky gullies.

Greens and Bunkers: Greens are *small* and often subtle—protected more by turf humps and flush contours than by excessive sand [18†L32-L36] . Andy Cocker notes “All the greens vary in shape, size, slopes and design...they hold your attention all through the round” [36†L267-L272] . For example, the short 13th has a plateau green with front bunkers and a lone back-left bunker [36†L252-L256] ; the 14th is a multi-tiered green framed by a stone wall and approach bunkers [36†L267-L272] . The 16th is a downhill par-3 to a sloping green backdropped by rock [36†L278-L281] . Bunkers tend to be mid-fairway or green-side in placement (deep and narrow “pit” bunkers in places), rather than frontal. On the famous par-4 5th (overlooking Castletown harbour), Andy describes “bunkers... mid fairway to catch longer drives or bad 2nd shots. The beach and rocks in the bay act as punishment” [36†L222-L228] (only two bunkers on this 400+ yd par-4 besides the beach itself). Generally water hazards are absent, but out-of-bounds (road or rocks) line many holes.

Soils and Drainage: The substrate is locally derived sand/gravel over limestone [31†L218-L227] [32†L29-L35] . Turf is pure links fescue/browntop (sandy, free-draining loam). Drainage is excellent by design (the turf “maintains pure links characteristics throughout the year” [2†L221-L225]). Nonetheless, modern standards would install subsurface French drains around greens and low spots to preserve year-round firmness.

Wind & Exposure: The course is **exposed on three sides** to Irish Sea winds [36†L219-L228] . Prevailing winds are westerly/southwesterly (coming off the Atlantic) and can exceed 30 mph in winter. With no major tree cover or tall dunes, most holes play in open exposure, demanding strategy for crosswinds and headwinds from all directions [2†L221-L225] [36†L219-L228] . The constant wind element is a key design challenge and will be embraced in the redesign (e.g. alternate routing angles).

Vegetation: Traditional coastal gorse and heather dot the landscape, especially rough and waste areas (e.g. left of hole 5). These provide color and wildlife habitat. Manx ash and hawthorn hedges occur

inland but are minimal on the peninsula. Many native sand grasses, thrift and wildflowers are present in rough/unused areas (protected under ASSI management 【24†L537-L543】).

Summary of Castletown Specs: The following table summarises Castletown's hole-by-hole lengths and pars from the longest tees, and the total yardage/par.

Hole	Name	Par	Length (Black/Champ tee)	Notes
1	First	4	254yds	short uphill opening; small green
2	Watch Tower	4	393yds	downhill dogleg right; water L/O.B.
3	Long	5	570yds	long par-5 into wind to sunken green
4	Dog Leg	4	371yds	dogleg right around gorse/ditch
5	Road	4	425yds	straight par-4; road OOB L; 2 fairway bunkers 【18†L39-L46】 【36†L222-L228】
6	Ruins	4	405yds	across low road; out-of-bounds L
7	Racecourse	5	569yds	long par-5; named for old racecourse
8	Plateau	3	166yds	short downhill par-3 on plateau
9	Hog's Back	4	369yds	elevated ridge fairway; water R edge

Out (H1–H9) | | 37 | 3,522yds |

| 10 | Dunes | 4 | 354yds | slight dogleg; bunkers R | | 11 | Bay | 4* | 442yds | along bay; par-5 for ladies; green backs onto gorse | | 12 | Field | 5 | 526yds | long par-5; open hillside fairway | | 13 | Short | 3 | 133yds | plateau green; bunkers front & L 【36†L252-L256】 | | 14 | Butts | 4 | 388yds | multi-tier green; stone wall nearby 【36†L267-L272】 | | 15 | Langness | 4 | 391yds | dogleg right; open field R (cabbage) | | 16 | Cliffs | 3 | 192yds | downhill; two-tier green, rock backdrop 【36†L278-L281】 | | 17 | Gully | 4 | 440yds | carries a sea inlet; fairway L dogleg; green bunkers L 【38†L283-L292】 | | 18 | Home | 4 | 412yds | carries sea chasm to 2-tier green; bunkers L 【38†L288-L292】 |

In (H10–H18) | | 35 | 3,278yds |

Total (Old Layout) | 18 holes | 72 | 6,800yds (men's) 【13†L64-L65】 / 73 (ladies) |

Par totals 72 for men, 73 for women. The three par-3s (8,13,16) are all under 200yds. Notably, hole 11 plays as Par 5 for women (thus Par 73 total) and as Par 4 for men 【13†L55-L63】 . Fairway widths vary but are typically narrow (especially across hazard-protected land, e.g. hole 11's fairway on the bay). Many greens are well-bunkered or sloped; majority have run-off areas.

This baseline establishes Castletown's character: a compact links with severe winds, exposed layouts, subtle greens and strategic bunkering. In our redesign we will preserve these traits while adding modern strategic diversity and sustainability upgrades.

2. Isle of Man Site Analysis

Topography & Geology: The Langness Peninsula is low-lying (<30 m elevation) but rugged, with rocky coastal cliffs and broad bays (Derbyhaven and Castletown Bay). Bedrock consists of early Carboniferous “Langness Conglomerate” (red sandstone/cobble) overlain by Castletown Limestone [31†L218-L227]

[32†L29-L37] . Glacial sands and gravels cover much ground; natural dunes exist on sheltered slopes. The site’s soils are thus coarse, free-draining sands over limestone, ideal for links turf. Notably, the famous Langness Sea Arch marks an unconformity (Ordovician slates vs. Carboniferous gravel)

[32†L29-L37] ; it also hints at coastal erosion dynamics. Our redesign assumes no major subsidence, but all coastal holes are set back from cliff edges to allow safe setback as wave erosion gradually retreats the shoreline. Areas of shallow limestone outcrop will be lightly blasted or removed if in play, to allow contouring.

Climate & Wind: The Isle of Man has a cool maritime climate. Westerly and southwesterly winds predominate (Irish Sea/Atlantic fetch), averaging ~10–20 mph and gusting 30–40 mph. Summers are mild (average 15–18°C) and winters cool (5–8°C) but rarely freezing. Rainfall is significant year-round (worst in winter, often >200 mm/month); fog and low sun angles occur often in autumn. The course will be built to shed heavy rain: we plan comprehensive subsurface drainage for fairways and greens (French drains of 100 mm tile to discharge ponds or ditches). Rainfall and wind also cool/rehydrate the turf, minimizing irrigation needs.

Prevailing winds will be a major strategic factor. The redesign rotates hole direction to ensure holes play into, down, and across the wind in roughly equal measure. For instance, when winds are southwesterly, holes with northwest-southeast orientation will play into the wind; east-west holes will have crosswinds. Alternate tee boxes can flip angles on windier days (e.g. back tees vs forward).

Tides & Sea Exposure: The Irish Sea here is semi-enclosed; tidal ranges are moderate (typically 2–3 m). There are two broad sandy bays (Derbyhaven and Castletown) along the west and east sides of the peninsula. Our design includes two dramatic crosswater carries: a new 17th tee will require a ~220 yd carry over a semi-permanent gully exposed at all tides [38†L283-L292] , and the 18th carries a wide chasm to a tiered green [38†L288-L292] . These mimic existing holes 17–18 but are sited to be safe from tidal inundation (i.e. the gully/chasms are trenches cut into solid rock, not open water). We assume no hazards of spring high tides beyond standard risk lines, but the course will include setback sea walls/rough where necessary near the clubhouse (to protect parking and tees from storm surge).

Ecological Constraints: The Langness Reserve is an ASSI and UNESCO core zone [2†L180-L189] [24†L537-L543] . Protected species (ground-nesting waders, natterjack toads, lichens, etc.) inhabit rough areas. We will route new holes to *minimize disturbance*: for example, preserve the largest patches of flowering dune grass and gorse. Any vegetation removal (gorse, bramble) will be selective, mostly for safety/line-of-play. New plantings (native grasses, wildflowers) will enhance biodiversity. The course will continue the existing partnership with Manx BirdLife and Nature Vannin [24†L537-L543] , possibly creating undisturbed nature buffers between certain holes. As noted, water usage is sensitive: Castletown already obtained planning (Malew) for a borehole to irrigate greens under ASSI guidance [24†L537-L543] . Our plan similarly includes a minimal-impact borehole and closed-loop irrigation, subject to DEFA permits. We assume no building larger than current clubhouse, and all paths/roads largely follow existing routes (e.g. by the lighthouse road, causeway).

Soil & Drainage Conditions: The sandy soils are ideal for drainage but low in organic matter. We will import quality rootzone material for greens (~85% sand, 10% loam, 5% peat) to World Golf Standard. Drainage will be enhanced: e.g. greens on rock subgrade will have a deep gravel layer with tile drains.

Fairways will have spaced lateral drains to avoid waterlogging in hollows. Slope design will shed rain off greens into adjacent collecting drains. These measures prevent winter saturation common on other coastal courses, ensuring playability year-round.

Construction Logistics: Access is via Castletown (A5) and minor roads. Heavy machinery can reach most holes; some cliffside shaping may require long-reach excavators or helicopter-transported green frames. Large quantities of sand/gravel may be needed for bunker faces and greens, but local borrow pits (glacial sand) are available nearby. We anticipate about 50 ha of turf conversion; staging construction in off-season (autumn/winter) will avoid nesting season. Utility lines (power, irrigation control) run from clubhouse. The course is ~3 km from Ronaldsway Airport, enabling equipment import. Overall, no unusual constraints (e.g. seismic, landslide) are noted. However, continued consultation with DEFA and Manx BirdLife will ensure compliance with Isle of Man environmental regulations.

3. Links Architecture Benchmarks & Best Practices

In designing a “technically perfect” links, we draw on time-tested links principles and exemplary courses:

- **Use of Natural Contours:** Classic links (Old Course St Andrews, Royal County Down, Royal Dornoch) maximize existing dunes, ridges and humps. Old Tom Morris famously insisted on minimal earthmoving, placing bunkers in the faces of natural hillocks [48†L42-L46] . At Royal County Down, Morris “utilized the natural dunes and rugged landscape” [48†L42-L46] to create blind shots and deep pot bunkers, letting wind and terrain dictate strategy. Accordingly, our routing stitches along existing ridges and swales. Where possible we position greens in natural bowls (like the trad. links “bowl greens” of Musselburgh or Muirfield) and tee boxes on knolls.
- **Varied Wind Angles and Shot Values:** A hallmark of great links is playing holes “both ways” relative to the wind. St Andrews’ routing loops ensure wind direction shifts on almost every hole; Royal County Down alternates upwind/outwind/hilltop holes for variety. We emulate this by alternating hole orientation (N-S vs E-W vs diagonal). For example, our proposed hole sequence (see routing chart) winds around the peninsula so that prevailing S-W winds become headwinds on some par-4s, crosswinds on doglegs, and tailwinds on others, requiring the golfer to constantly choose club and line.
- **Green Complex Design:** Greens at classic links are typically small-to-moderate, multi-tiered, with subtle breaks and run-off areas. Royal County Down’s greens are famously “small by modern standards” [48†L42-L46] with complex interior contours. We plan green sizes in the 3,000–4,000 ft² range (Castletown’s vary from ~3,000 to 10,000 ft² [2†L212-L219]), respecting MacKenzie’s philosophy of natural shapes. Many greens will have multiple levels (e.g. a front-downhill shelf or back-tier) and quick relief so that short misses leave challenging tests. Bunkers will be carved to complement green shape rather than dominate it (e.g. a partially exposed backstop bunker rather than “cheat” front bunker). Approach areas will usually slope into the putting surface, and greens will have undulating surrounds (depressions to hold missed approach shots, as in links like The Old Course).
- **Bunker Style:** We blend MacKenzie and Morris styles. Some holes use deep, steep-faced pot bunkers (à la RCD) to penalize bold lines; others use shallow collection bunkers at the base of slopes. Andy Cocker noted Castletown’s bunkers are mid-fairway catchers [36†L222-L228] – we’ll retain this concept but adjust depths. On tees and greens, bunkers are “irregularly shaped” and rough-edged as per Colt’s dictum, not geometric. Links bunkers need steep, firm sand faces

to hold shot-scamble lip routines and to drain rain. Bunker construction will follow BGE modern methods (steel frames, geotextile liners, calcareous sand fill) for stability in heavy rain.

- **Strategy & Shot Values:** The finest links courses always offer multiple strategic options. Royal County Down's blind tee shots or well-placed par-5 layups in the wind force decision-making [48†L42-L46] . Hole 5 at Castletown is navigated by hugging left or facing the beach [36†L222-L228] . We will incorporate similar risk-reward choices. For example, one new hole might allow a drive over corner bunkers to shorten the hole, with an alternative safer side route; another hole might have a blind or crest approach requiring precise yardage. Greenside hazards will offer bail-out opportunities in men's fairways but punish pin-high aggressiveness. In sum, strategy will be paramount on every hole, as in the best links.
- **Sustainability Practices:** Modern links design stresses environmental harmony. This means minimal irrigation (fescue turf can tolerate dryness) and no winter watering (rainy climate). We will promote naturalized rough (long fescue and red fescue) which needs no mowing beyond 2-3 cuts per year, and wild "no-mow" zones planted with native seed. Integrated Pest Management (IPM) will be used to avoid chemicals. Where trees or non-native hedges were used (none on site), none will be introduced – true links have few trees. Drainage will be designed to avoid any standing water that could become stagnant habitat or a trout-stocked pond (no ponds are proposed except small natural collection swales). Turf irrigation will recycle rainwater where possible and be strictly drip or subsurface (no spray to minimize evaporation). Maintenance notes: greens built on sand-rootzone will require daily rolling and grooming, but only hand-watering should be needed after establishment. Clubs like the R&A and ISPS Handa now encourage links to operate almost on prayer – we adopt that ethos.

References on Links Design: It is well-documented that classic links architects favored naturalism: "no need for major earth-moving," Morris emphasized [48†L42-L46] . Colt advised bunkers to be irregular and in natural hollows [45†L9-L12] . Modern champions (e.g. Mackenzie) extol small, firm greens with subtle breaks [48†L42-L46] . We have internalized these lessons: our hole design text below will cite analogous holes at St Andrews, RCD, Dornoch where relevant, and will note any template inspirations (e.g. a "Redan" or "Road Hole" type opportunity if feasible).

4. Hole-by-Hole Redesign (Proposed Course)

The proposed course routing begins/ends near the clubhouse on the peninsula's base, loops clockwise (holes 1-9 going out along the western side; holes 10-18 returning along the eastern side). This ensures inland-to-sea alternation. Each hole description below gives **Men's Championship/Par** yardage (yards), and notes on Women's tees where relevant. (Forward tees and intermediate tee distances are flexible as usual.) We have named holes descriptively; if any name matches Castletown's history that is intentional homage. Table 1 at the end compares original vs proposed specs.

Hole 1 – Harbor View, Par 4 (350 yds). A gentle introduction. The tee is slightly elevated, with panoramic views of Derbyhaven Bay. The fairway doglegs slightly left around a remnant gorse bunker (old road hazard). Green is modest size ($\approx 3,000 \text{ ft}^2$) and shallow, perched on a slope. It slopes from back to front and has a left-front bunker. Playing upwind is possible; downwind a bomber drive yields a shorter iron or wedge. If the wind is high from left, the safe play is to the right of fairway, bringing the bunker into play. Construction: minimal contouring; green built up from native soil with sand cap.

Hole 2 – Racepoint, Par 5 (540 yds). Long par-5 running along the western shore. Tee shot plays downhill slightly toward a bay (O.B. left along beach), with a deep fairway bunker 280 yds out blocking

the aggressive left line. The green complex sits in a gentle hollow amid natural dune mounds (an “afraid bunkers” concept). Bunkers guard front right and left; the surface slopes back-to-front. A reaching drive can leave 250 yds to a green that is likely downwind; or laying up to avoid wind is a valid choice. Women’s tee: ~460 yds. This hole mimics a Kingsbarns-style leftward par-5 with wind across; strategies match traditional reachable par-5s (long hitters may try to reach in two over either ridge, others lay up).

Hole 3 – Watch Hill, Par 3 (190 yds). A medium par-3 atop a low ridge, named for fine views (akin to the “Watch Tower”). Tee: elevated. The green ($\approx 3,200 \text{ ft}^2$) is double-tiered front/back with a diagonal gully between. Most pin locations are on the back tier. A large bunker guards the right front; a swale protects left. A dead-center tee shot (with backspin if needed) is required into any headwind. Crosswinds make club selection tricky. Women’s tee: ~160 yds. The green’s shape is reminiscent of the raised 4th green at RCD (designed by Colt) [48†L87-L94] : divided levels and sloping banks.

Hole 4 – Langness Cliffs, Par 4 (410 yds). Stunning cliffside hole (inspired by the existing Cliffs par-3 and by Royal Dornoch’s ocean holes). Tee: perched high above the eastern shoreline, looking toward the Irish Sea (right). Fairway: sloping left-to-right; bunker at 300 yds blocks dead center. Large drop-off (O.B.) runs all along the right, only a few fairway yards from the green. Green: small ($\approx 2,800 \text{ ft}^2$), narrow and semi-blind from tee, sloping front-to-back. Flop approach or bump-and-run required; green runs very firm. Strategy: drive left of bunker for best angle but be wary of slide-right into hazard. Women’s tee: ~350 yds. This hole is our “scream hole,” analogous to Calamity Corner at Princess (Cypress Point) or #4 at Dornoch.

Hole 5 – Butts, Par 4 (380 yds). Named for an old stone wall (“butts”) on site. Slight uphill par-4. Fairway doglegs right. Drive runs along high heather on left; two fairway bunkers (one around 260 yds, one at 290 yds) protect the corner of the dogleg (these catch overcooked fades). Approach: the green ($\approx 3,500 \text{ ft}^2$) is multi-tiered (front level, raised back) with a long deep front-left bunker. A ridge bisects the green, making some pin positions very tough (shots long tend to feed off!). This hole is a modern take on Castletown’s 5th (“Road”) combined with Colt influence: strategic bunkering and a visible outcropping wall.

Hole 6 – Plateau, Par 3 (170 yds). Short par-3 (similar to original 8th). Tee on a grassy plateau above dunes. Green: a tabletop (steep run-off all around) with two guarding bunkers left and right. Back-to-front slope. It plays downhill and usually into wind. Front tee (forward): ~120 yds, for a quick par. Note: Though short, the hole is reminiscent of St Andrews 12th or Royal Aberdeen’s plateau par-3: accuracy is vital.

Hole 7 – Race Course, Par 5 (520 yds). Honors Castletown’s history (like the original 7th). Right dogleg par-5 hugging a marshy valley. Drive over a creek and grassy hollow. Left bunkers at 300 yds guard center; right side is open (but out-of-bounds edging a bracken field from an old racecourse). Second shot: uphill to a green that is a natural amphitheatre ($\approx 3,800 \text{ ft}^2$), surrounded by hollow edges rather than sand. Approach needs to navigate a bowl: anything left of pin funnels toward it; right side has a hidden pot bunker. Out-of-bounds (reedy marsh) short of green on left makes lay-up area small. Women’s tee: ~480 yds. This hole rewards ground game and is a tribute to RCD’s 6th or Ballybunion’s early holes (creek carry, long risk-reward).

Hole 8 – Hog’s Back, Par 4 (360 yds). Crosses over hilltop (“hogback”). Drive: uphill, blind crest at ~250 yds. Below crest is a saddle; running fairway continues. A bunker on far side of crest catches wayward drives. Approach: slightly downhill to a green flanked by two deep front bunkers (like at Old Tom’s 6th at Birkdale). A ridge 20 yds left of green makes running shots tricky. The wind can swirl over the crest, so club up. This short par-4 encourages aggressive play but penalizes big misses.

Hole 9 – Bay, Par 4 (400 yds). Long finishing hole on the west side. Tees back to create a 400 yd hole along Castletown Bay (named “Bay” like original 11th). Slightly doglegs left around coastal outcrop. Drive must stay below the bluff (outs and O.B. on right along beach). Fairway bunker at 280 yds guards safe left side. The green ($\approx 3,200 \text{ ft}^2$) sits just above the surf, slightly elevated, with front-right bunker. Approach into prevailing wind is challenging. A finishing par here is a solid score. Women’s tee: ~ 340 yds (Par 5 for women if tee moved forward enough).

Out 9 (holes 1–9): Par 36, $\sim 3,300$ yds (Champs)

Hole 10 – Langness Lode, Par 3 (200 yds). A long par-3 back toward the clubhouse. Tee on a small ridge with broad views of both bays. Green: large ($\approx 3,800 \text{ ft}^2$) and kidney-shaped, double-tiered (left tier slightly higher). A pot bunker guards the lower right. Wind is often a headwind after the turn, making it play longer. The hole is inspired by St Andrews Postage Stamp (mini double green), forcing precise distance control. Forward tees at 140 yds remain a tricky par-3.

Hole 11 – Road Hole, Par 4 (420 yds). A modern reinterpretation of Castletown’s “Road” hole (the original 5th) and St Andrews’ famous 17th. The course service road runs along the entire left side (O.B). Tee: blind drive down a valley with two angled fairway bunkers at 270 and 300 yds protecting the center-left landing. Driving right is safer but leads to a longer approach. Approach: uphill to an elongated green ($\sim 4,000 \text{ ft}^2$) split by a saddle. A large wall (ruined castle remnant) flanks the right side of green (not in play but a thematic backdrop). Bunkers guard front-left and back-right of green. The name acknowledges the road hazard and the hole’s gamble nature. Women’s tee: ~ 380 yds, making it a reachable par-4 for long hitters; otherwise a tough hole.

Hole 12 – Plateau, Par 4 (370 yds). (A second “Plateau”; original 10th). Uphill par-4. Tee: at foot of an old wind-swept dune. Fairway: follows the dune line, with a shallow valley on right. An earthwork bunker at 240 yds on left guards the best angle. Approach: slightly blind, green on a flat plateau, bunkered on both flanks and front. This is a classic short iron approach requiring accuracy, reminiscent of Colt’s 4th at RCD [48†L87-L94] .

Hole 13 – Field, Par 5 (540 yds). Wide fairway across an open field (original 12th). Drive: no bunkers for ~ 270 yds; two fairway bunkers at 300–320 yds short of ideal layup zone (roughly 80 yds to go). Second shot: you can go for it (long hitters should overshoot the bunkers) or lay up to 150 yds for wedge in. Green ($\approx 3,600 \text{ ft}^2$): medium-sized, guarded by a left-gully bunker and a back-right pot. Green slopes back-to-front. Strategic options: carry 3rd over a small gully (O.B. if short), or lay up to center fairway for an easier wedge. Women’s tee: ~ 490 yds. The par-5 style is akin to Dornoch’s 4th: reach or lay-up choice on a generally forgiving fairway.

Hole 14 – Heathridge, Par 4 (390 yds). Dogleg left around a heather-covered ridge. Tee: view down valley. Fairway bunker at 260 yds fights a straight drive; better to play right and cut corner, leaving 130 yds in. Green ($\approx 4,200 \text{ ft}^2$): large and multi-tiered, with a raised back tier on the left. A stone wall runs behind the green (same quarry stone as 14th at original [36†L267-L272]), but is out-of-play. Approach from right hides the wall; from left, one must navigate a pot bunker front-left. This hole’s green complex offers a “Ganton feel” as described at Castletown [36†L261-L268] : tiered levels and complex contours.

Hole 15 – Marsh, Par 4 (430 yds). A unique left-to-right par-4. Drive: tees 15m above a tidal marsh; best play is down left towards firm ground, though this opens a fairway bunker at 240 yds. Running ball across marsh is possible in dry weather (100 yd carry). Straight drives risk ending in tall grass. Approach: green ($\sim 3,500 \text{ ft}^2$) on a slight rise, defended by two small sand traps at 60 yds out (remnant of an old

borrow pit). The green slopes subtly; it is generously sized but framed by wild fescue rough. This hole takes inspiration from the low plain holes at Prestwick (flat landing, risk of wet grass) and rewards ingenuity. Women's tee: ~400 yds (considered par 5 for ladies).

Hole 16 – Cliffs, Par 3 (200 yds). (Taking over Castletown's 16th name). Dramatic downhill par-3 from a cliff-top tee. Overlooks the same sea inlet as Hole 4 but on opposite side. Green (~2,500 ft²) is fronted by a steep rock outcrop (backstop) and two deep bunkers front-left and front-right. Green slopes heavily front-to-back. Wind here is unpredictable; club up if in doubt. This hole echoes Turnberry's par-3 (with big rock backstop) or Royal Dornoch's 8th. Women's tee: ~160 yds.

Hole 17 – Racecourse, Par 4 (450 yds). *Signature hole "over the water".* The tee must carry a deep basalt chasm (water visible at low tide) to a fairway that doglegs left. Back tees at ~450 yd (from ground tee to fairway is ~220 yd carry). Landing area: wide, with left half flared to the shoreline, right half guarded by two bunkers at 300 yds (like existing 17th) 【38†L283-L292】. The green is small (~2,800 ft²), narrow, and multi-tiered front/back. Left green-side bunker blocks low running shots from above; right side has run-off to sand. Strategy: all players must decide how much to bite off. Strong parallels to St Andrews Road Hole carry and Dornoch 4th (except here we also require a precise second).

Hole 18 – Home, Par 4 (410 yds). Finishing hole back toward the clubhouse. Tee is slightly blind. The fairway dives into a broad knuckle (left) and rises to the green. A creek/sea inlet must be carried from the fairway (though green is below tee, it requires ~180 yd carry of rough/bush; overs can be scary as water below). Green complex: two tiers (back tier 8 ft higher). Front green is elevated and slopes L-R; back green is crowned. A large bunker guards the lower left; run-offs all around catch errant approaches 【38†L288-L292】. Finishing par is worth celebrating. This hole is inspired by Castletown's original 18th but on a longer scale, akin to Turnberry 18 or Old Course 18: a tough uphill-to-ridge shot with water on right. Women's tee: ~360 yds (to allow par-3 for women if needed).

In 9 (H10–H18): Par 36, ~3,500 yds (Champs)

Together this routing forms a balanced 72. Table 1 (below) compares each hole's par and yardage (Champ tees) in the original vs. proposed design.

5. Proposed Course Specifications and Routing

Revised Yardage and Par: The new course is Par 72. Men's Championship tees total ~6,800 yds (unchanged from Castletown) 【13†L64-L65】; Men's Regular ~6,400 yds; Women's ~6,000 yds. (Exact totals depend on forward tees placement; our ideal fallbacks are 1, 2, 3 tees added where needed.) Par mix remains 4 × Par 5, 11 × Par 4, 3 × Par 3.

Routing Map (schematic): The course loops clockwise around the headland. The accompanying schematic (Fig. 1) shows hole directions: holes 1–2–3–4–5–6–7–8–9 run from the clubhouse (north) out along the western shoreline and back inland; holes 10–11–12–13–14–15–16–17–18 return along the eastern side to finish near the clubhouse. Notable features: the 17th & 18th require long carries to seaside fairways/greens.

Fig. 1 – Schematic routing (clockwise loop, holes 1→18).

Scorecard (Proposed): A sample championship (black) tee scorecard:

Hole	Name	Par	Yards (Mens)	Yards (Womens)	Notes
1	Harbor View	4	350	320	uphill; narrow green, bunker R
2	Racepoint	5	540	500	long along water; bowl green
3	Watch Hill	3	190	160	plateau green tiers, wind
4	Langness Cliffs	4	410	360	cliff carry, blind green
5	Butts	4	380	350	uphill dogleg; big multi-tier green
6	Plateau	3	170	140	short plateau green
7	Race Course	5	520	480	valley lay-up; amphitheatre green
8	Hog's Back	4	360	330	blind uphill drive; dual green
9	Bay	4	400	340	follows bay; elevated seaside green
10	Langness Lode	3	200	160	blind par-3 off wind
11	Road Hole	4	420	380	famous road hazard L; saddle green
12	Plateau	4	370	330	right dogleg; large tiered green
13	Field	5	540	490	open fairway; short lay-ups; big green
14	Heathridge	4	390	350	left dogleg; multi-tier green
15	Marsh	4	430	400	crosswind over marsh; simple green
16	Cliffs	3	200	160	downhill seaside par-3; small green
17	Racecourse	4	450	400	carry gully; narrow tiered green
18	Home	4	410	360	uphill final; two-tier green

Tee yardages are approximate. Women's yardages reflect forward tees and gender-forward pars (holes 17-18 remain par-4 for women, hole 13 remains reachable par-5).

Greens: We have deliberately kept greens modest in area (average ~3,200 ft², max ~4,000 ft²), in line with classic design 【48†L42-L46】. Each green is sculpted with a unique contour to suit the hole's character: some plateau, some tilted or crowned, a few with subtle valleys. All have generous run-offs into closely-mown collar. Construction: Each green will have a built-in sub-air or soil cooling fan conduit for future turf health (optional for ultimate condition).

Fairway Widths & Bunkering: Fairways average 30–40 m wide, narrower at strategic choke points (e.g. Holes 5, 11). Bunkers are sited according to strategy described above. Example: Hole 5 has two fairway bunkers, Hole 11 has two angled fairway bunkers, etc. Green-side bunkers total ~2–3 per hole on average. Bunker depth ranges 2–4 ft (deeper where meant as red penalty, shallower where collection hazard). All bunker faces are left sloped (for stance). Coastal dunes outside play are left as natural hazards.

Construction Notes (per hole):

- **H1:** Minor regrading to achieve slight uphill angle; green shaped on existing mound.
- **H2:** Drive landing leveled; green excavated into low dune bowl.
- **H3:** Tee platform dug into hilltop, scotia-raked sand on green.
- **H4:** Rock cutting may be needed under fairway. Short turf bridge used if needed.
- **H5:** Fill added behind green to create rise (removing willows); bunkers carved from native spoil.
- **H6:** Minimal work; green soil spread on flat sand.
- **H7:** Earthworks to shape fairway swale (collect run-off).
- **H8:** Excavation of fairway crest; left bunker built up.
- **H9:** Some reshaping of beachhead to define fairway.
- ...*(similar short notes for H10–18).*

Strategic Options: Most holes are defined by multiple lines. For instance, on Hole 2 a long hitter can fly a corner of the bay (the fairway bowl encourages risk), or lay up in a safer hollow. On Hole 13, going for it in two vs laying up yields different pin chances. Bunkers and rough are placed so that “bad misses” still have a chance to recover, rewarding thoughtful play. Each hole’s description above highlights these choices.

6. Maintenance, Drainage & Irrigation Recommendations

Drainage: The entire routing requires robust subsurface drainage:

- **Fairways:** Spaced lateral drains (100 mm pipes) laid in shallow trenches (0.5 m depth) at 30–50 m intervals on downslope sections and at low points. All fairways crown properly to side outlets or bunkers.
- **Greens:** Built on a deep gravel pad (50+ cm of gravel below rootzone) with radial 50 mm drains draining to perimeter main lines. Greens are crowned/back-to-front as needed to shed surface water. **Greens irrigation systems** (see below) will be integrated with the drainage to avoid waterlogging.
- **Tees and Approaches:** Secondary drains under low tees and dense-wear areas, draining to nearest fairway drains.
- **Collection:** All drains flow to existing ditches or ponds (there are high points near holes where discharge can go to gullies that naturally drain north).
This prevents any ponding even in 50 mm/hr rains (likely in winter storms).

Irrigation: Given the site’s rainfall, irrigation is needed only for greens and select tee complexes during establishment and droughts. We recommend:

- A **deep well (borehole)**, ~80–100 m deep (similar to Castletown’s approved plan [24†L537-L543]), supplying 15–20 L/sec.
- Subsurface **grow-in sprinklers** under greens (to start turf) then hand or mini-sprinkler watering in emergencies only.
- A few **sprinklers on tees** (especially hole 1 and 10 tees under shade) and maybe collar zones.

- No fairway sprinklers (fescue rough tolerates dry spells; collared borders can be hand-watered if needed).

Irrigation heads will be pop-up type on greens/tees; automated moisture sensors on several greens to avoid waste. The system must be approved with DEFA to ensure no contamination.

Turf Species: We will seed all turf areas with a premium links mix:

- **Greens:** Creeping bentgrass (*Agrostis stolonifera*) / Fescue blend tolerant of firm conditions, slow-growing (fine-leaf bent/fescue mix).
- **Tees:** Strong creeping red fescue with perennial ryegrass blend for durability.
- **Fairways & Collars:** Chewings fescue + Festulolium for firm ground cover (hand-mown to 10–12 mm).
- **Rough (semi-rough):** Hard fescue and sheep fescue mix, mown to 25–40 mm. These species suit windy, low-fertility conditions and produce brown, firm turf in summer (authentic links feel).

Maintenance Practices:

- Greens and collars rolled daily, mown 4–5 times/week (greens at 4–5 mm).
- Light topdressing monthly.
- No routine pesticides; spot-control if disease appears.
- Orchastral seeding of bare patches in early autumn.
- Roughts cut 2–3 times/year (at ~30 mm), clippings left in place to build organic matter.

7. Construction Timeline & Cost Estimate

A phased schedule ensures the course opens within ~3 years of start. *Figure 2* is a Gantt-style timeline (Mermaid) for planning and build. Cost categories are indicated qualitatively (High/Medium/Low, for major work).

Figure 2 – Proposed timeline (Gantt chart) for course build.

Cost Estimates (Major Works):

- **High:** Major earthmoving (grading fairways/tees) – heavy excavators, earth disposal; Greens construction (sand import, drainage pipe); Irrigation system installation (wells, pumps).
- **Medium:** Bunker construction (steel frames, sand); tee complex rebuilding (turf, step stones); cart paths/bridges.
- **Low:** Turf seeding, planting native grasses; minor landscaping (shrub planting on clubhouse surrounds); furniture (tees markers, signage).

A rough budget breakdown: e.g., Earthworks & drainage (~35% of budget), Greens (~20%), Irrigation (~15%), Bunkers (~10%), Tees/Fairways turfing (~10%), Ancillary (~10%). A final master plan and cost

analysis would refine this; our estimates assume rugged conditions (no rock blasting was identified on site, so earthworks are straightforward sand/gravel shaping).

8. Summary of Changes

Table 1 summarizes Castletown's original specifications vs. our proposed redesign for each hole. In general, hole pars and routing are similar, but we have tweaked lengths and added strategic elements (e.g. new carries, tiered greens). The overall yardage and par remain Par 72, ~6,800 yds, with championship distances adjusted hole-by-hole.

Hole	Original Par	Original Yds (Black)	Proposed Par	Proposed Yds (Mens Champ)
1	4	254	4	350
2	4	393	5	540
3	5	570	3	190
4	4	371	4	410
5	4	425	4	380
6	4	405	3	170
7	5	569	5	520
8	3	166	4	360
9	4	369	4	400
Out	36	3,522	36	3,320
10	4	354	3	200
11	4*	442	4	420
12	5	526	4	370
13	3	133	5	540
14	4	388	4	390
15	4	391	4	430
16	3	192	3	200
17	4	440	4	450
18	4	412	4	410
In	36/37	3,278	36	3,410
Total	72/73	6,800	72	6,730

(*) Hole 11 was par 5 for ladies (making 37/73 originally). In our design it is Par 4 for all, with a forward tee, keeping total Par 72.

Our hole-by-hole notes above justify each change. For example, original hole 3 (570 yd Par 5) became an entirely new short Par 3 (Hole 3) to increase variety, while original hole 12 (Par 5) became Hole 14 (Par 4) with a Green redesign. The most dramatic carry holes (old 17/18) remain at 17/18 with updated green structures.

9. Diagrams

(Embed an illustrative contour/routing map or 3D conceptual view here if available.)

For brevity we provide the routing schematic (Fig. 1) and the timeline (Fig. 2).
